SIDE PROJECTS

In my spare time, I dedicate myself to learning new techniques and technologies through side projects

La Pépite

I developed a web application for a guesthouse and table d'hôte using Next.js (SSR) and integrated Smoobu as the channel manager to prevent double bookings and efficiently manage prices

Caroline Debray

I created a showcase website using Next.js to display paintings, utilizing Airtable as the database and Cloudinary to optimize the images

EXPERIENCE

Lead project manager   Embie   2023 - CURRENT

My primary responsibility was to ensure that projects stayed within scope, followed budget constraints, and were completed on time. This role also provided me with insights into understanding user needs.
Through my tenure, I significantly enhanced my attention to detail, team communication, organizational skills, initiative-taking, and autonomy in project management. Leveraging these qualities, I swiftly transitioned into the role of lead project manager.

Linear Leadership Organisation Communication Scope tracking Budgetting
Risk management

Lead front-end developer   Embie   2020 - CURRENT

I've worked on a multitude of projects that have significantly enhanced my front-end skills, with additional growth in backend. My attention to detail and dedication to delivering polished worked led me to become the lead front-end developer and the tech lead on three projects.
In addition, I've contributed to the creation of several design systems, notably using Storybook and implemented tests with Playwright or Jest depending of the needs in most applications.
My preferred libraries range from react-hook-form to react-query, trcp, and tailwindcss. Furthermore, I led the design of a comprehensive learning program tailored for newcomers. Moreover, I've actively contributed to various internal tasks, including recruitment initiatives, refining project development processes, managing staffing, and offering insights on company decisions.

CERTIFICATIONS

All certifications are available on my linkedin or upon request

Shift nudge   CURRENTLY DOING

A web design course by Matt D. Smith on Figma. It taught me how to develop and design effective UI interfaces and provide optimal user experiences through videos and homework assignments

UI UX Figma

Just Javascript

A JavaScript course created by Dan Abramov (former React core team member). This course taught me to rethink my mental model not only about JavaScript but also the fundamentals of development

Javascript

Project management: communication for effective teamwork

I've gained proficiency in project management methods and techniques, enabling me to enhance team conversations, meetings and productivity. Additionally, I've strengthened my skills in budget management, scoping, planning and risk management.
